

Swim, bluefin tuna live in the Atlantic, Pacific and Indian Oceans although the worst place for survival is the Atlantic because it's where the most fishermen are fishing. They are caught in nets and the tuna are not fast enough to get away from the nets. Overfishing is the main cause of the bluefin tuna being endangered.

Bluefin Tuna

Largest of all the tunas

Underwater they swim up to 1,000 meters down

Everyday they swim and they dive for mackerel

Fast because of how their fins move through the water

Indigo for their color

North Atlantic Ocean is where the Atlantic bluefin tuna lives
