

to get the bag of things to get them, but I don't know how to get them, I'm up to you though...

I can be equal into a tent for water eating? No, would that I would want help getting out of it but not really.

FUN FACTS ABOUT ME!

- Sometimes my tent are called "carned tent" because of the bright colors and patterns.
- My species are actually all color blind!
- I have a second set of fiddle (stomach n)
- My tent is actually white, but please don't...

Back to me... Normally the minimum size of my species is about 5 feet (1.5 meters), though my species usually "tent tent" can range to 10 inches! What a small tent, don't tell them I said that. And the largest size of my species is up to 8 feet!

My habitat is perfect so I can make camouflage into the tent, and surprise attack my prey! When our tent line you sleep by a small tent, I might be there n)

I don't have a lot of predators actually. My only predators are Crocodiles, Komodo, sharks, and humans.

I am a nocturnal predator. During the day I hide and sleep in my little cave in the rocks I call home. I don't have any good eyes so I use my sense of smell. I don't really hunt for my prey actually, I just sit around and wait for them to mistake me as someone of tent.

Thank you for your time and also, I don't think you would sleep and read this long! but a lot of people would like to see me, tent.

Now you know more about me, my habitat, and basically my whole life.

Thank you!
