

Did you know that seahorses are fish? Seahorse colors vary and can change to offer camouflage or signal a potential mate. Seahorses prefer calm and shallow water. Seahorses are attack predators. They stay as still as they can. They wait for food and other tiny things to pass by and they will suck them up.

Did you know that seahorse dads give birth to babies? Baby seahorse is called fry! Female seahorse transfers eggs into male seahorse pouch and then the male seahorse fertilizes and nourishes the eggs. Baby seahorses enjoy clinging to each others tails in a small group. Mommy seahorses and daddy seahorses also like to cling to their tails and swim together in the ocean.

Did you know that seahorses are in danger? Seahorses are in danger because human beings are polluting the ocean. We are also overfishing and trade seahorses illegally. We should stop damaging their homes by not polluting, stop overfishing, prevent littering, and don't do illegal trade on seahorses. Protecting seahorses will also help protect other sea creatures.
